### Levels of depth in learning

The world has changed, part of all these changes brings new ways of learning, exactly in this moment, we're facing the COVID-19 pandemic, that scares everybody about what we should do, or how the education can take advantage of all these challenges. And, here it comes my part in this document in order to tell you about a more excellent way in the process of learning.

About it, I didn't know in the last days, I've been learning, because now I'm applying to a job as an English teacher for a High School, but I really appreciate this new knowledge because it helps me to become into a better teacher, and I hope it can help you.

First of all, think for a moment in an iceberg, maybe you'll think from the top until the water, but you need to know that an iceberg is going deeper, until the deeps of the ocean, that's the same with learning process, for this case I'll use 3 fundamental parts:

Elemental: We can say that this part, it's the beginning, and it's a good part of knowledge, but don't misunderstood my words, if you want to become into the best teacher, please let yourself to work hard for the final one. In this part it's really important that students can understand in a context of a topic, now perfectly but it's the right place to start, after with that knowledge that student can work in order to understand in a general way.

Basic: We're in the middle, if your students came to this part, you can be happy in the half, because they have the potential to success. In this part they'll be able to understand the concept of the topic, even they'll be able to develop conceptual maps where they can know what's the main topic, the meaning of the topic they're learning, see its fellow brothers in the main topic, and what's next with the learning topic, that will help the students to have a clear definition of a topic.

Advanced: This can be hard, but if the student worked really hard in the past 2 ones, they are able to continue, because this part has the main purpose that they can analyze more about the topic, even by questions you'll be able to know if they understand the topic, that will help them to synthesize in one paragraph their new knowledge. But the process isn't totally done, because they'll be able to compare with other topics, see the differences in order that finally they can apply their new knowledge to their lives.

In conclusion my dear reader, you can't be happy if your students are in the elemental or basic part, it's expedient that they can accomplish an advanced knowledge, because they'll be able to face our world problems, now you know it, it's up to you, I know that you'll decide for the advanced way.
